

KADIR HAS UNIVERSITY

IT304 – Information System Analysis and Design Term Project Report

12..05.25

Final

Project Team 11

Aleyna PEKMEZCAN, 20211805014

Ali Samet AKDEMİR, 20182304023

İrem GULDUR, 20211805022

Ekin OZTURK, 20211803044

1. Project Context and Initiation

We named our project “InternBridge” as part of the CyberMACS Alumni System initiative, a platform designed to support the professional growth of students and graduates from the CyberMACS Erasmus Mundus Joint Master’s Degree in Applied Cybersecurity. Currently, our core focus is *Career and Job Placement Support*, aligning with the program’s mission to foster meaningful connections between academia and industry.

While features such as *Event Management and Participation Tracking* are acknowledged within the broader system vision, they are not part of our implementation scope. However, the current system lays a functional foundation for *Networking and Community Building*, *Engagement Metrics*, and *Basic Data Analytics and Reporting* - integrated from the start.

To initiate our project, we conducted the following:

- Assigned responsibilities and Scrum roles for each iteration, as mailed to the assistant in the previous week via Outlook.
- A brainstorming session to analyze the university students face when searching for internships and jobs was held. Although it is a problem all four of the group members are facing currently, we planned an interview with the Zburada team — a real-world career network platform founded by one of Aleyna’s friends— to further gain insight.
- Finalized the project with the name InternBridge, a career development platform connecting students with opportunities.
- Defined the project goals and scope, and formed a direction for how the technical infrastructure -in this case, UI mockups- should be structured.

This week, since there was no heavy technical workload, aside from our initial brainstorming meeting and sprint review, we updated each other through voice messages in our WhatsApp group instead of holding a formal Daily Scrum. However, we agreed to conduct Daily Scrum meetings via Microsoft Teams in the following sprints.

Additionally, we have decided on sharing the task assignments and backlog management through shared documents and spreadsheets.

2. Application of Scrum methodology

Our adaptation of the Scrum methodology to manage the development of InternBridge includes:

- Dividing the development into three sprints, each lasting two weeks: Planning, Design & User Flow, Finalization & Demonstration.
- Rotation of Scrum *roles* for each iteration among team members, to ensure experience and shared sense of responsibility, already mailed to our instructor.
- Conduction of Scrum *events* such as Sprint Planning, Daily Scrum, Sprint Review, and Sprint Retrospective, if not conducted yet, scheduled.
- Using Scrum *artifacts* including the Product Backlog, Sprint Backlog, and Burndown Chart to track progress and guide development, and third-party tools such as Lucidchart and draw.io for the visualization of the processes.
- Using effort and value estimation, via PlanITPoker, for each Sprint Planning meeting to help the team align expectations and define a realistic Sprint Backlog.

3. Scrum Roles, Artifacts, and Events Table (Planned vs. Actual)

Category	Scrum Concept	Planned Usage	Actual Usage (Updated)
Roles	Product Owner	Prioritizes backlog, represents stakeholders.	Prioritized tasks in Sprint 1, handled change requests from stakeholder.
	Scrum Master	Facilitates Scrum, removes impediments.	Scheduled sprint planning meetings, ensured blockers discussed on Teams daily.
	Development Team	Develops system functionality.	Created login UI, set up MySQL tables, integrated login form with alumni table.
Artifacts	Product Backlog	List of all features and requirements.	Populated with 15 features; login, dashboard, admin metrics, feedback module, etc.
	Sprint Backlog	Detailed tasks to complete in Sprint 1.	Broke down top 5 backlog items; 2 were completed, 1 partially done due to time limits.
	Increment	Completed, working product chunk.	Login page fully functional and tested. Feedback and analytics modules thought-through.
Events	Sprint Planning	Tasks and goals for the sprint are defined.	Sprint planning held for March 25; team committed to 5 tasks, estimated 24 hrs of work.
	Daily Scrum	Daily 10-minute updates on progress and blockers.	Held on Microsoft Teams at 10 AM. Missed 2 days due to overlapping classes.
	Sprint Review	Demonstrate completed work at sprint end.	Set for May 15, demo will include login and job application form.
	Sprint Retrospective	Reflect on sprint process and improvements.	Will be held after Sprint Review to evaluate sprint duration, task splitting issues.
	Sprint	Two-week development period.	Started March 25, planned end May 15. Mid-sprint adjustment made due to two members' quiz week.

We aimed to apply Scrum roles as clearly as possible, observed in practice, along the way boundaries between roles occasionally became blurred. As first-time Scrum practitioners, we found ourselves navigating some overlaps. Despite such challenges, we remained committed to the methodology and continuously refined our team dynamics throughout the sprint.

4. Work Breakdown Structure (WBS)

WBS Code	Task Name	Estimated (hrs.)	% Completed
1.0	Planning	22	98,2%
1.1	Define Project Scope	3	100%
1.1.2	Set Team & Roles	5	100%
1.1.3	Select & Use Tools	2	80%
1.2	User Role Identification	5	100%
1.2.2	Feature Listing	3	100%
1.2.3	Documentation & Report Writing	4	100%
2.0	Design & User Flow	22	0%
2.1	Page Mapping	6	0%
2.1.2	UI Mockup Design – First Iteration	8	0%
2.2	Feedback Collection & Editing	4	0%
2.2.1	Documentation & Report Writing	4	0%
3.0	Finalization & Demonstration	18	0%
3.1	UI Mockup Design – Final Version	7	0%
3.1.2	Interactive Prototype Demo Preparation	6	0%
3.2	Final Presentation Slide Design	4	0%
3.3	Submission & Peer Review	1	0%

In the WBS table shown, time is detailed in hours (hrs.) for each. Additionally, the dependencies between tasks are expressed logically through the codes. For example, task 1.1.2 ‘Set Team & Roles’ can naturally be done after 1.1 ‘Define Project Scope’ has been completed, subtasks are ordered in such a way that they depend on the completion of their respective parent tasks.

4.1 PERT/CPM Chart

Critical Path: A → E → G → J → H → K → L → M → N, 41 day

5. Product Backlog Table

InternBridge Project - Product Backlog									
ID	User Story	As a/an	I want to...	so that...	Notes	Estimate (1-10)	Order	Value (1-5)	Status
PB01	Project Initialization	Team Member	Define the project scope, identify key stakeholders, and establish project requirements	We have a clear roadmap and understanding of what needs to be delivered	Including requirement gathering, and team role assignments	5	1	4	Done
PB02	Agile Workflow Setup	Team Member	Set up and conduct Scrum processes, communication channels, and collaboration tools	The team can work efficiently & track progress throughout the project	Includes Scrum framework setup, sprint planning, backlog estimation, and burndown chart creation	6	3	4	Done
PB03	Student Profile & CV	Student	Create a profile and upload my CV	I can showcase my skills to employers	Student profile includes name, school, major, graduation year, and uploaded CV	6	2	5	To Do
PB04	Company Job Posting	Company	Register and post job/internship listings	I can reach and recruit qualified students	Job posting includes position, description, required skills, location, duration	6	3	5	To Do
PB05	Filtered Job Listings	Student	View job listings with filters	I can find relevant opportunities quickly	Filter by department, skills, city, and availability	4	4	4	To Do
PB06	Application Tracking	Student	Apply and track application status	I can stay updated on my recruitment process	Students see real-time updates of their applications	6	5	4	To Do
PB07	User Login	User	Log into the system securely	I can securely access and manage my account	Supports email/password and social login	3	6	3	To Do
PB08	Employer View Applicants	Employer	See applicants for posted jobs	I can evaluate and select candidates	Includes filtering by position and application status	5	7	3	To Do
PB09	Admin Dashboard	Admin	Monitor system activity	I can ensure smooth operations on the platform	Only accessible by admin; shows user stats and logs	4	8	2	To Do

As the project progresses, the backlog is planned to be regularly reviewed and updated to reflect changes in scope, Product Owner feedback, or evolving needs.

5.1 Sprint Backlog Table

TASK ID	TASK DESCRIPTION	ASSIGNED TO	EST. TIME (HRS)	STATUS
SB01	Define Project Scope	Ali Samet Akdemir & Aleyna Pekmezcan	3	Done
SB02	Stakeholder & Requirement Review	İrem Güldür	1	Done
SB03	Team Needs Analysis	İrem Güldür	1	Done
SB04	Define Personas	Ali Samet Akdemir	1	Done
SB05	Zburada Interview Planning	Aleyna Pekmezcan	2	Done
SB06	Scrum Setup	Ali Samet Akdemir	2	Done
SB07	Communication Setup	Ali Samet Akdemir	1	Done
SB08	Tools & Channel Configuration	Ekin Öztürk	1	Done
SB09	Product Backlog Preparation	Aleyna Pekmezcan	3	Done
SB10	Sprint Planning	Ekin Öztürk	1	Done
SB11	Estimate Backlog Tasks	Aleyna Pekmezcan	1	Done
SB12	Collaborative Estimation	All members	1	Done
SB13	Create Burndown Chart	Aleyna Pekmezcan	1	Done
SB14	Report Documentation & Editing	Aleyna Pekmezcan	4	Done

Sprint 1 was dedicated to planning and preparation activities. That is why, only the tasks PB01 and PB02 were derived from the Product Backlog since we have focused on initiating the project, analyzing requirements, and setting up the development environment. Remaining tasks will be selected from the Product Backlog in the upcoming sprints, based on priority and value to ensure alignment with Scrum methodology.

5.2

6. GAI use

Throughout the making of this report, we occasionally used Generative AI tools as a support mechanism - not as a replacement for our thinking or writing. For instance, we used AI to help us rephrase certain parts of the text more clearly or check the grammar of some sentences or initial brainstorming. It was also helpful when organizing ideas or creating draft versions of project documentation sections, especially during time-pressured moments. However, the final decisions on structure and content were always made by us based on our project discussions, tasks, and teamwork experiences and the tables & charts were all created by us on MS Excel & MS Word. We see GAI as a tool for polishing, not producing - it helped us express our ideas better.

7. Context Diagram

The system block located in the center of our context diagram is InternBridge. We have decided on its external entities being; Students to send applications and create/update profiles, Company Representatives to post opportunities and review, therefore approve or reject applications, and System Administrators to manage users and control job postings. An additional Career Office, there to keep track of career reporting and mentorships, is added to monitor requests and job listings accordingly.

8. Major Processes of the System

1	Student Profile Management	Students create, edit, and manage their professional profiles.
2	Internship and Job Search	Students search and apply for internships and jobs posted by companies.
3	Job Posting and Management	Companies post internship/job opportunities and manage their postings.
4	Application Review and Feedback	Companies review student applications and optionally send feedback.
5	Basic Reporting and Analytics	Admins and University Career Center generate reports on applications, hiring rates, and system usage.

9. Level0 Data Flow Diagram

- I. *Alumni* search from *Alumni* is processed by 1.0 (*Alumni Profile*) and the fellow *Alumni* is returned to *Alumni*.
- II. *Student* search from *Alumni* is processed by 2.0 (*Student Connection and Mentorship*) and the *Alumni Mentor* is returned to *Student*.
- III. *Job Data* from *Company* is processed by 3.0 (*Job Posting and Management*) and the *Structured Jobs* are stored in the *Jobs File*.
- IV. *Applications* from *Alumni* are processed by 4.0 (*Internship and Job Research*) and *Structured Applications* are stored in the *Application File*.
- V. *Daily Applications* from the *Application File* are processed by 5.0 (*Application Review and Feedback*) and *Reviewed Applications* are updated in the *Application File*.
- VI. *Updated Applications* from the *Application File* are processed by 4.0 (*Internship and Job Research*) and the *Application Status* is returned to *Alumni*.
- VII. *Application Metrics* from the *Application File* are processed by 6.0 *Basic Reporting and Analytics* and a *Evaluation Report* is provided to the *Admin*.

10. Purpose of developing use cases during systems analysis

Specialty to aid in understanding how a scenario-focused model should act from the point of view of the users, use cases are a crucial point for system analysis. Their working principle is on a variety of aspects; such as the user's goals, structure of interactions, and response of the systems. All make it promising to match the human-centered demands of users rather than just the technical specifics. Their understandable visuals and easily readable narratives help us to provide a straightforward and flowy communication. We can observe and provide feedback on the system, uncertainties and modification costs are reduced to optimal levels, therefore prototyping gets easier. Thankfully, interactions between actor and behavior, functions within the system to understand and analyze user demands and purposes within the system are depicted. Usually, use cases ensure that the system is optimal in:

1. Simplicity of its use
2. Dependence of the users' demands
3. Reviewing, analyzing, and testing
4. Cooperation and communication for encouraging development

With their assistance, a system that is approachable and meets the stakeholders' demands while still being viable is hoped to be achieved.

11. Use Case Diagram

a.

1	Company	Companies post internship/job opportunities & manage them with admin control
2	Student	Students search for internships/jobs & submit applications through the platform
3	Alumni	Alumni and students are matched for mentorship; communication and connection is established.
5	Admin	System administrators and university staff generate reports on job placements & mentorship success.

b.

Use case title	Control job posting
Primary actor	Company
Level	White
Stakeholders	Company, Admin
Precondition	Company registers for system *Company must be logged in
Minimal guarantee	Rollback of any uncompleted action
Success guarantee	Job posting done and stored in job database
Trigger	Company clicks “Add Job Posting” or “Update Posting” button on dashboard
Main success scenario	Company logs in. Company accesses job posting panel. Company fills job posting form. System validates the form. Job posting is stored in Jobs File. Company views job status and applicant list.
Extensions:	1. There is no job advertised. 1.1 The business withdraws its permit application. 1.2 Errors are displayed by the system and necessary details are requested to be filled. 1.3 The business makes another attempt leading to another submit. 2. There is no visible tracking for the applicants. 2.1 The business wants assistance or sees an empty list.

Use case title	Make internship application
Primary actor	Student
Level	White
Stakeholders	Student, company
Precondition	Student is registered in the system

Minimal guarantee	Rollback any of uncompleted application
Success guarantee	Application is submitted and recorded in Application File
Trigger	*Student selects a job and clicks “Apply” button
Main success scenario	Student logs in. Student navigates to internship/job listings. Student browses or searches available jobs. Student selects a desired job. System retrieves job data from Jobs File. Student fills and submits the application form. System saves application to Application File.
Extensions:	1. The search has been failed. 1.1 Site is leaved by the student. 1.2 Student scrolls manually. 2. The function to apply is unsuccessful. 2.1 The student leaves the site. 2.2 Repeated attempts by students. 3. An incomplete application form. 3.1 Missing fields are highlighted by the system 3.2 Student fix and submit it again.

Use case title	Mentor-Student matching
Primary actor	Alumni
Level	white
Stakeholders	Alumni, Student, Career Office
Precondition	Alumni register for system
Minimal guarantee	Rollback of any uncompleted actions
Success guarantee	Mentor-mentee relationship successfully established and logged
Trigger	Alumni clicks “Find a Mentee” from mentorship section

Main success scenario	Alumni logs in. Alumni accesses mentorship interface. System fetches list of available students. Alumni searches for a student. Alumni sends mentorship request. Student accepts the request. System stores match and notifies Career Office.
Extensions:	1. Search function fails. 1.1 Alumni withdraw their application. 1.2 Reattempts are done by alumni. 2. Request is not fulfilled. 2.1 Retry requests from alumni. 3. No reply from the student 3.1 Reminders are sent via the system. 3.2 Alumni can wait or cancel.

Use case title	Analytics & Admin reporting
Primary actor	Admin
Level	White
Stakeholders	Admin, Career Office
Precondition	Login system as admin
Minimal guarantee	Report is not generated, but system remains functional
Success guarantee	Reports are successfully generated and shared with stakeholders
Trigger	Admin navigates to “Reporting” or “Analytics” section
Main success scenario	Admin logs in. System retrieves application metrics from Application File. Admin selects type of report (platform or career-based). System generates platform report and sends to Admin. System generates career report and sends to Career Office. Admin reviews report and makes improvements based on insights.

Extensions:	1. There are no metrics available. 1.1 Administration reloads the site. 1.2 Admin gets in touch with assistance. 2. No report was sent. 2.1 Reattempts are done by admin 3. An inconsistency in the data was found. 3.1 Error is marked by the system. 3.2 The administrator looks into the problem.
-------------	---

Top-Level Use Case Diagram

12. Primitive Process: Internship Application Logic

Decision Table

CONDITIONS	R1	R2	R3	R4	R5	R6	R7	R8
User Logged In	Y	Y	Y	Y	N	N	N	N
Profile Completed	Y	Y	N	N	Y	Y	N	N
Alumnus Available	Y	N	Y	N	Y	N	Y	N
ACTIONS	R1	R2	R3	R4	R5	R6	R7	R8
Allow Request	✓	✗	✗	✗	✗	✗	✗	✗
Show Warning	✗	✓	✓	✓	✓	✓	✓	✓
Log Attempt	✓	✓	✓	✓	✓	✓	✗	✗
Suggest Profile Fix	✗	✗	✓	✓	✗	✗	✓	✗

The business rules for processing mentorship requests in the CyberMACS Alumni System are modeled in the following decision table. The table describes the business logic for mentorship requests. It relies on three conditions:

- (1) the user being logged in,
- (2) their profile being complete, and
- (3) the alumnus being available.

One or more of this set of conditions matches one of eight predetermined rules (R1–R8), with a set of operations to be performed by the system.

The key actions include:

- **Request and Permission:** Requested if a request is made depending on all possibilities (e.g., R1).
- **Show Warning:** Triggered in case of any unfulfilled condition, to inform the user about submission issues.
- **Log Attempt:** Records meaningful attempts other than actual submission—for example, if the user is logged in or has system access (e.g., R1–R4).
- **Profile Suggestion Fix:** Shown if the user has an incomplete profile (like R3, R4, R7) and you want them to update their information.

This code just logically checks if there's request and verifies that it's valid and correct type. Meanwhile, it helps users by giving corrective advice for missing or non-compliant requirements, and it also grants administrators ability to trace valid usage attempts for performance monitoring and audit.

Simplified Decision Table

CONDITIONS	▼ R1	▼ R2	▼ R3	▼ R4	▼ R5	▼ R6	▼
User Logged In	Y	Y	Y	N	N	N	
Profile Completed	Y	Y	N	Y	N	N	
Alumnus Available	Y	N	-	-	Y	N	
ACTIONS							
Allow Request	✓	✗	✗	✗	✗	✗	
Show Warning	✗	✓	✓	✓	✓	✓	
Log Attempt	✓	✓	✓	✓	✗	✗	
Suggest Profile Fix	✗	✗	✓	✗	✓	✗	

This reduced decision table was generated by combining rules in the original decision table which produced the same system response. In particular, Rules 3 and 4 were merged into one because they both represent situations where the user is logged in and the profile is not complete. The actions in these cases include logging the attempt and showing a warning message, which alerts the user about their status in relation to alumni requirements. If it weren't for the log and warning actions, the request would be denied.

Additionally, Rules 5 and 6 have an overlapping structure because both represent scenarios where the user is not logged in but has a complete profile. In these cases, only the warning and logging actions are performed, and alumni availability is not considered.

What you get is a cleaner, more powerful table that preserves 100% of the logical coverage with minimal redundancy. It makes the logic more readable and also highlights which conditions truly affect the system's decision-making.

13. Database Design

For the database design of our *InternBridge CyberMACS Alumni System* initiative, already generated in the *MIS323 Course Term Project* using *MySQL*, an open-source, widely-supported, and most compatible DBMS, as required is used. Although our old data dictionary and ERD align with our system, adjustments were made, such as deleting irrelevant tables, adding an Application table to monitor job applications, and adding feedback for previous work experiences.

Table Name	Attribute Name	Contents	Type	Format	Domain	PK or FK	FK Referenced Table					
Alumni	Alu_id	Alumni unique ID	CHAR(5)	99999	10000-99999	PK						
	Alu_f_name	Alumni first name	VARCHAR(25)	Xxxx	Male, Female, Other							
	Alu_l_name	Alumni last name	VARCHAR(25)	xxxx								
	Alu_grad_year	Alumni graduation year	DATE	dd-mm-yyyy								
	Alu_birth_year	Alumni birth year	DATE	dd-mm-yyyy								
	Alu_gender	Gender of the alumni	VARCHAR(10)	Xxxx								
	Alu_phone_num	Alumni phone number	VARCHAR(15)	Xxxx								
	Alu_email	Alumni email address	VARCHAR(75)	Xxxx								
	Exp_area	Expertise area unique ID	VARCHAR(75)	Xxxx								
	Current_Position	Alumni's current job position	VARCHAR(100)	Xxxx								
	Alu_status	Active or inactive status	CHAR(1)	X	Active,Inactive							
	Alu_country	Country of residence	VARCHAR(50)	Xxxx								
	Alu_id	Alumni unique ID as mentor	CHAR(5)	99999	10000-99999			FK	Alumni			
	Company	Comp_id	Company unique ID	CHAR(5)	99999	10000-99999	PK					
Comp_name		Company name	VARCHAR(100)	Xxxx								
Comp_industry		Company's industry sector	VARCHAR(50)	Xxxx								
Comp_location		Company location	VARCHAR(100)	Xxxx								
Comp_contact_info		Company contact information	VARCHAR(200)	Xxxx								
Job	Job_id	Job unique ID	CHAR(5)	99999	10000-99999	PK						
	Job_title	Job title	VARCHAR(100)	Xxxx								
	Job_desc	Job description	VARCHAR(500)	Xxxx								
	Job_start	Job start date	DATE	dd-mm-yyyy								
	Job_position	Job position name	VARCHAR(100)	Xxxx	10000-99999	FK	Company					
	Job_end	Job end date	DATE	dd-mm-yyyy								
	Company_id	Company unique ID offering the job	CHAR(5)	99999								
	Alu_id	Alumni unique ID holding the job	CHAR(5)	99999				10000-99999	FK	Alumni		
Feedback	Feedback_id	Feedback unique ID	CHAR(5)	99999	10000-99999	PK						
	Feedback_comment	Feedback comments	VARCHAR(500)	Xxxx	1-5							
	Feedback_date	Date feedback was provided	DATE	dd-mm-yyyy								
	Satisfaction_rating	Rating of satisfaction	NUMBER	9								
	Alu_id	Alumni unique ID providing feedback	CHAR(5)	99999	10000-99999			FK	Alumni			
	Company_id	Company unique ID to relate the feedback	CHAR(5)	99999	10000-99999			FK	Company			
Application	Application_id	Application unique ID	CHAR(5)	99999	10000-99999	PK						
	Application_status	Current status of the application ('pending', 'reviewed', 'accepted', 'rejected')	VARCHAR(50)	Xxxx	Predefined List							
	Applied_at	Date the application was made	DATE	dd-mm-yyyy	10000-99999			FK	Job			
	Job_id	Job unique ID	CHAR(5)	Xxxx								
	Alu_id	Alumni unique ID	CHAR(5)	99999						10000-99999	FK	Alumni

The reasoning and the use of the behind the selected 5 tables is given in the table below.

TABLE NAME	SUPPORTS INTERFACE(S)	JUSTIFICATION
ALUMNI	User Login Screen, Form Page, Report Display	Used for alumni login (b1), job applications (b2), and reporting/analytics (b3).
JOB	Form Page, Report Display	Stores internships and job postings linked to applications and companies.
COMPANY	A Report Display	Company metadata used in admin reporting (job sources, industries).
APPLICATION	A Form Page, A Report Display	Captures internship/job applications made by alumni for report tracking.
FEEDBACK	A Report Display	Collects alumni satisfaction and system feedback for dashboard display.

14. Human Interface Design and its Specifications

a) A User Login Screen/Page

The image shows a login interface for CyberMACS Alumni. At the top, there is a blue graduation cap icon followed by the text "CyberMACS Alumni". Below this, the title "Log in" is centered. There are two input fields: "Alumni ID" and "Password", both with white text on a light gray background. Below the "Password" field is a blue button with the text "Log in". At the bottom, there are two links: "Forgot Alumni ID or Password?" on the left and "Register" on the right, both in blue text.

Page Name: CyberMACS Alumni – Log in

Intended Users: Designed to provide access to personalized dashboards or role-based features, this page is used by alumni and administrators for secure login.

Purpose of the Page: This page is used to verify users by obtaining their Alumni ID and Password. It is the access point of the system and provides access to user-specific dashboards.

Main Tasks Supported:

- Access with password and personalized Alumni ID
- Verifying credentials for secure access to the system
- Directing users to personalized role-based screens after login
- Providing links to password recovery, Alumni ID recovery and registration links

Usage Timing: When any user tries to log in to the system, this page is first visited. It is also important when the password or ID is forgotten during access after logging out or for registration processes.

The image shows a web form titled "CyberMACS Alumni" with a blue graduation cap icon. Below the title is a grey rectangular box containing the text "Forgot Alumni ID or Password?". Inside this box, there is a label "E-mail Address" above a white rounded rectangular input field. Below the input field is a blue rounded rectangular button with the text "Send Reset Link". At the bottom of the grey box, there are two links: "Already have an account ?" on the left and "Register" on the right, both in blue text.

Page Name: CyberMACS Alumni – Forgot Alumni ID or Password

Intended Users: This page will be used by people who have forgotten their password or Alumni ID and will be used to reset their password or learn their Alumni ID by sending a link to their e-mail address.

Purpose of the Page: To facilitate access without administrator intervention, we offer a secure service to Alumis who have forgotten their password or ID by sending a link to their email address to log in.

Main Tasks Supported:

- Accessing the e-mail addresses of users
- Sending a secure link to e-mail
- Allowing users to access login or registration pages if they wish.

Usage Timing: This support process is used when the ID or password is forgotten and therefore the system cannot be accessed.

The image shows a registration form for CyberMACS Alumni. At the top, there is a blue graduation cap icon followed by the text "CyberMACS Alumni". Below this is a grey rectangular box containing the registration form. The form has a title "Register" in bold black text. It includes four input fields: "Full Name", "E-mail Address", "Password", and "Confirm Password". Each field is a white rounded rectangle with a blue border. Below the input fields is a blue rounded rectangle button with the text "Register" in white. At the bottom of the grey box, there are two links in blue text: "Already have an account ?" and "Forgot Alumni ID or Password ?".

Page Name: CyberMACS Alumni – Register

Intended Users: This page is for someone who will be new to the system, to create an account securely and use features such as mentoring and job applications.

Purpose of the Page: It creates login information for new alumni users by collecting their name and e-mail information. After this registration process is completed, users can complete their profiles from within the system.

Main Tasks Supported:

- Filling in fields such as full name, email, and creating a password
- Sending information for a new alumni account
- Providing links below in case of logging in or password reset and forgotten alumni ID.

Usage Timing: Available for first-time users or users who have registered before but are now returning.

b) A Form Page

The image shows a web form titled "Alumni Profile Form". The form is contained within a light gray box. It has several input fields and a status section at the bottom. The fields are: Name (John), Surname (Doe), Graduation Year (2023), Birth Year (1995, with a dropdown arrow), Gender (Male), Phone Number (+90 555 123 4567), Email (john.doe@example.com), Current Job Position (Security Analyst), Expertise Area (Network Security, Cyber Threat Intelligence), and Country (Germany, with a dropdown arrow). At the bottom, there is a "Status" section with two radio buttons: "Active" (selected) and "Inactive".

Alumni Profile Form	
Name	Surname
John	Doe
Graduation Year	Birth Year
2023	1995
Gender	
Male	
Phone Number	
+90 555 123 4567	
Email	
john.doe@example.com	
Current Job Position	
Security Analyst	
Expertise Area	
Network Security, Cyber Threat Intelligence	
Country	
Germany	
Status ☒ Active ☐ Inactive	

Page Name: Alumni Profile Form

This is the official page for alumni to enter and maintain their personal and professional information within the alumni system of a program (in our case *InternBridge* for CyberMACS).

Intended Users:

- Graduates of the program (Alumni): Individuals who have completed the academic program and want to stay connected through the alumni network.
- Program administrators: May use the form for internal data entry or editing alumni profiles when managing the database.
- Career or community coordinators: May use the collected data to support professional networking, job placement initiatives, or community events.

Purpose of This Page:

- Collect and store **up-to-date alumni data**, including contact, academic, and career information.
- Enable alumni to **remain active** in the program's network by indicating their status and sharing their area of expertise.
- Support the program in **tracking alumni outcomes**, which can be useful for marketing, funding, accreditation, and event planning.

Main Task Supported

- **Profile Creation and Editing:** Users can input or update fields such as name, graduation year, birth year, job position, expertise area, contact info, and activity status.
- **Status Management:** Alumni can toggle between active/inactive to reflect their engagement level with the network.
- **Professional Visibility:** By sharing job titles and expertise, alumni support potential networking, mentorship, and collaboration opportunities.

Usage Timing:

1. Post-Graduation Enrollment (Initial Use):

- Alumni are typically encouraged to fill out the form shortly after graduating to officially join the alumni network and allow the program to maintain contact.

2. Profile Updates (Periodic Use):

- Alumni may revisit the page to update personal details (e.g., new email or phone), career changes (e.g., new job or promotion), or residence (e.g., relocating to another country).

3. Status Changes (As Needed):

- Users can change their engagement status to “Inactive” when they no longer wish to participate or “Active” if they want to rejoin activities, networking, or mentorship.

c) A Report Display

Page Name: User Engagement Report

Intended Users: The user for this page is found in the Admin users group — people who are supporting users of the Alumni System. This page can also be used to gauge the interest of potential internees or job applicants. For alumni users, individual feedback can be retrieved. Program coordinators can use the data for internal monitoring and to consider improvements.

Purpose of the Page: This is a high-level summary of the different types of users interacting with system components like internship applications, mentorship activity, events, and job posts. It provides engagement information in a summarized and visualized format, and allows users to download reports for internal reporting or auditing.

Main Tasks Supported:

- Show a graphical overview (bars or similar) of how much users are interacting with the system's main features
- Display key performance indicators in a summary panel, such as total interactions, average time spent, and highest completion rate
- Provide export options for reports in PDF and Excel formats
- Present a detailed table showing the profile of users, including name, role, organization, and interaction status

Usage Timing: The page should be visited monthly or quarterly when evaluating system performance, and immediately after launching alumni-led efforts such as webinars, mentorship cohorts, and career events. It is also valuable during formal reporting periods, audits, or strategic meetings related to alumni engagement and platform performance.

Bar chart here, visualizes user engagement by displaying the total interaction, average time, and completion rate of each system feature.

If we hover over "Offer Mentorship" here, we see that the average time to perform this action is 6

minutes, which is a fairly long time for a given action.

These insights indicate which interfaces require further user effort and where usability enhancements or additional guidance may be necessary.
